Q Where is cloud data stored?

* They are stored in data centers managed by cloud providers such as AWS, Microsoft, Azure and Google cloud.

* These data centers are located in different regions and countries around the world.

* Organization can often choose the region where their data is stored based on performance, cost and legal requirements.

* Data is usually replicated across multiple servers to ensure backup, reliability and disaster recovery.

2) Data sovereignty and cross-border Data transfers

Data sovereignty :

- * It means that data is subject to the laws of the country it is stored
- * Different countries have different privacy and security regulations
- * Organisation must comply with the local laws governing their stored data.

Cross Border Data transfer:

- * The movement of data from one country to another.
- * It is common in cloud computing because cloud providers have global infrastructure.
- * Such transfers must comply with privacy laws and include proper safeguards to protect personal data.

3) Importance of Regulations (GDPR and similar Privacy Laws)

GDPR (General Data Protection Regulation)

- * Protects the personal data and privacy of individuals
- * Requires organizations to obtain user consent before collecting personal data
- * Grants users rights such as accessing, correcting, and deleting their data.
- * Imposes heavy penalties for non-compliance

Other Privacy Laws:

- * India: Digital Personal Data Protection (DPDP) Act, 2023
- * California (USA): California Consumer Privacy Act (CCPA)
- * Brazil: LGPD (General Data Protection Law)

Benefits:

- * Protect User Privacy
- * Increase customer trust
- * Improve data security
- * Ensure legal compliance
- * Reduce the risk of data breaches and penalties.
